Peripheral Security System
SorbaView® Window Dressing Application with HubGuard® and LineGuard™

Prep well **beyond** entire site according to facility protocol to ensure adherence.

**Allow to dry completely** (for at least 30 seconds). Note: If the prep doesn’t dry completely, the integrity and security of the dressing may be compromised.

A skin protectant may be used according to preference or protocol.

**Allow to dry completely.**

### HUBGUARD APPLICATION

Apply small HubGuard cushion under catheter hub *(Figure A)*.

Apply the bowtie shaped HubGuard over the catheter to secure *(Figure B)*.

### DRESSING APPLICATION

Remove larger liner without touching adhesive. Align notch over catheter hub and center the insertion site in window. Adhere dressing to skin *(Figure C)*.

Remove remaining liner. From center outward, firmly smooth down entire dressing to ensure all edges are adhered well.

Optional: Record information on label, remove liner and position label on the edge of the dressing.

### LINEGUARD APPLICATION

Fold the two top tabs back to create a clear area for the tubing. Do not remove liner *(Figure D)*.

Turn the LineGuard over and pull one of the tabs to expose a small amount of adhesive *(Figure E)*.

Apply LineGuard to skin under catheter hub. Press lightly to adhere *(Figure F)*.

Pull edges of both liners out from under the LineGuard to expose the remaining adhesive. Press to adhere LineGuard to skin.

Remove liner from first top tab and wrap tab around tubing *(Figure G)*.

Create j-loop with tubing, remove liner from second top tab and wrap second tab around j-loop to secure *(Figure H)*.

Optional: A tape strip may be used to further secure tubing.
