SORBAVIEW® SHIELD IS A ONE-STEP, CATHETER SECUREMENT SYSTEM THAT COMBINES THE FEATURES AND BENEFITS OF A SORBAVIEW DRESSING WITH SHIELD TECHNOLOGY.

APPLICATION

Prep well **beyond** entire dressing site according to facility protocol to ensure dressing adherence. **Allow prep to dry completely.** This usually takes less than one minute. Note: If the prep doesn’t dry completely, the integrity and security of the dressing may be compromised. A skin protectant may be used according to preference or protocol. **Allow skin protectant to dry completely.**

Note: Liner has a label attached that can be used later to record information. Remove larger liner without touching adhesive (**set aside liner**). Center the insertion site and sheath hub in the middle of the large window. Align side port tubing with the dressing v-notch and remove remaining liner (**Figure A**). Adhere dressing to skin. Guide tubing out through notch and overlap the edges to form a seal (**Figure B and B1**). Exit site edges should be touching or overlapping. From center outward, firmly smooth down entire dressing to ensure all edges are adhered well (**Figure B**).

Without removing the liner, slip the closure piece **under** side port tubing and **over** edge of dressing (**Figure C**). Remove the liner one side at a time and smooth down to adhere.

Record information on label, remove from liner and position label on the edge of the dressing.

REMOVAL

Optional: A tape strip may be used to secure catheter tubing during removal (**Figure D**).

Locate v-notch on outer edge of closure piece (**Figure D**) and pull apart in opposite directions to break center perforations (**Figure E**).

Holding the catheter in place, gently peel back closure piece and dressing together as one piece. Peel back slowly, keeping dressing close to the skin, following catheter toward insertion site (**Figure F**).

Optional: Use an alcohol prep pad underneath dressing while peeling back to help deactivate the adhesive.
